

Jinhao Du

Boston, MA | +1 617-888-6484 | jinhaodu1203@gmail.com

EDUCATION

Northeastern University, Boston, MA

Expected May 2028

Bachelor of Science in Mathematics and Data Science

GPA: 3.79/4.0 | Dean's List: Fall 2025

Relevant Coursework: Foundations of Data Science; Advanced Programming for Data Science; Database Design; Data Structures & Algorithms; Linear Algebra; Probability & Statistics

TECHNICAL SKILLS

Programming: Python (pandas, NumPy); C++ (fundamentals); Jupyter Notebook

Data Analysis: Data cleaning and preprocessing; exploratory data analysis; linear regression; logistic regression; K-means clustering

Tools: Microsoft Excel; Git; GitHub

Languages: Mandarin Chinese (Native); English (Professional working proficiency)

PROFESSIONAL EXPERIENCE

Shanghai CRIC Information Technology Co., Ltd. - Wuxi Branch

Wuxi, China

Real Estate Market Research & AI Applications Intern

Jun 2026 - Aug 2026

- Conducted on-site research across Wuxi residential developments, collecting pricing, sell-through, product-positioning, channel, and marketing data through site visits and sales-office interviews
- Maintained project datasets and weekly market-tracking tables; compared competitors and identified pricing and absorption trends for property evaluations and market reports
- Applied Cowork enterprise AI tools to organize research, draft content, and streamline recurring reporting workflows for digital market-analysis deliverables

Real Estate Market Research Intern

May 2025 - Aug 2025

- Supported Wuxi residential-market research by collecting and organizing project information for database updates, project comparisons, and internal research materials

PROJECTS

Sleep & Stress Data Analysis - Northeastern University

Spring 2026

- Collaborated on a 4-person team analyzing relationships among sleep, stress, and behavioral variables using Python
- Cleaned and explored the dataset and applied linear regression, logistic regression, and K-means clustering (k=3) to identify patterns and evaluate predictive relationships
- Presented methodology, model performance, limitations, and findings in a team presentation

HOOP HAVOC - Python/Pygame Game

2026

- Developed a two-player basketball game in Python/Pygame with character selection, AI opponents, collision and ball-physics systems, scoring, and training modes
- Managed version control and releases with Git/GitHub and packaged a Windows build with PyInstaller for distribution
